

Python Course Contents:

1. Introduction

- 1.1 Introduction
- 1.2 Why python?
- 1.3 Installing Python and versions
- 1.4 Interactive mode, creating and running programs
- 1.5 Blocks, Indentation, lines and commenting

2. Input/output and assignment

- 2.1 Printing
- 2.2 Input strings and numbers
- 2.3 Variable declaration and assignment
- 2.4 Operators
- 2.5 Expression and Code evaluation
- 2.6 Error messages

3. Flow Control Loops and decision making

- 3.1 While loop
- 3.2 For loop
- 3.3 if, else
- 3.4 exit, break

4. Built in Data-Types

- 4.1 Strings and characters
- 4.2 Lists
- 4.3 Tuples
- 4.4 Dictionaries
- 4.5 Files

5. Functions

- 5.1 Function declaration
- 5.2 Basic function
- 5.3 Pass by value

6. Error Handling

- 6.1 Except
- 6.2 Try, Except and raise exceptions

7. Basic Classes and instances

- 7.1 Defining a class, basic class
- 7.2 Instance
- 7.3 Class Data
- 7.4 Properties

8. Debugging

- 8.1 Debugging

Advanced Python Contents

9. Classes and Objects detailed

- 9.1 Classes detailed
- 9.2 Constructors
- 9.3 Generators
- 9.4 Iterators
- 9.5 Decorators

10. Regular Expressions

- 10.1 Defining regular expressions
- 10.2 Compiling regular expressions
- 10.3 Using regular expressions
- 10.4 Match and find
- 10.5 Examples

11. Networking, DB and CGI

- 11.1 Networking, telnet and ssh
- 11.2 Database connection
- 11.3 Basic graphics

12. Parsing

- 12.1 Special purpose parsers
- 12.2 Writing a recursive descent parser by hand
- 12.3 Parsing command delimited lines
- 12.4 Parsing functions
- 12.5 Parsing names, phone numbers
- 12.6 XML parsing

13. Multithreading

- 13.1 Multithreading and examples

14. Logging and debugging again

- 14.1 Logging and debugging examples
